

# DATA TABLE(S)

**When creating steps, sometimes data doesn't easily fit on one line when using: @Given, @When, @Then.....**

Scenario: Submit valid data via contact us form

Given I access webdriveruniversity

When I click on the contact us button

And I enter a valid first name

And I enter a valid last name

And I enter a valid email address

And I enter comments

| example comment one | example comment two |

When I click on the submit button

Then the information should successfully be submitted via the contact us form

@And ("^I enter comments\$")

```
public void i_enter_comments(DataTable comments) throws Throwable {
```

```
List<List<String>> data = comments.raw();
```

```
System.out.println("I enter comments " + data.get(0).get(0));
```

```
System.out.println("I enter comments " + data.get(0).get(1));
```
